1. Code Quality and Organization (2 Points)	
2. Functionality (4 Points)	
3. Creativity and User Interface Design (2 Points)	
4. Performance and Stability (2 Point)	
Total: 10 Marks	
Evaluator	

Description:

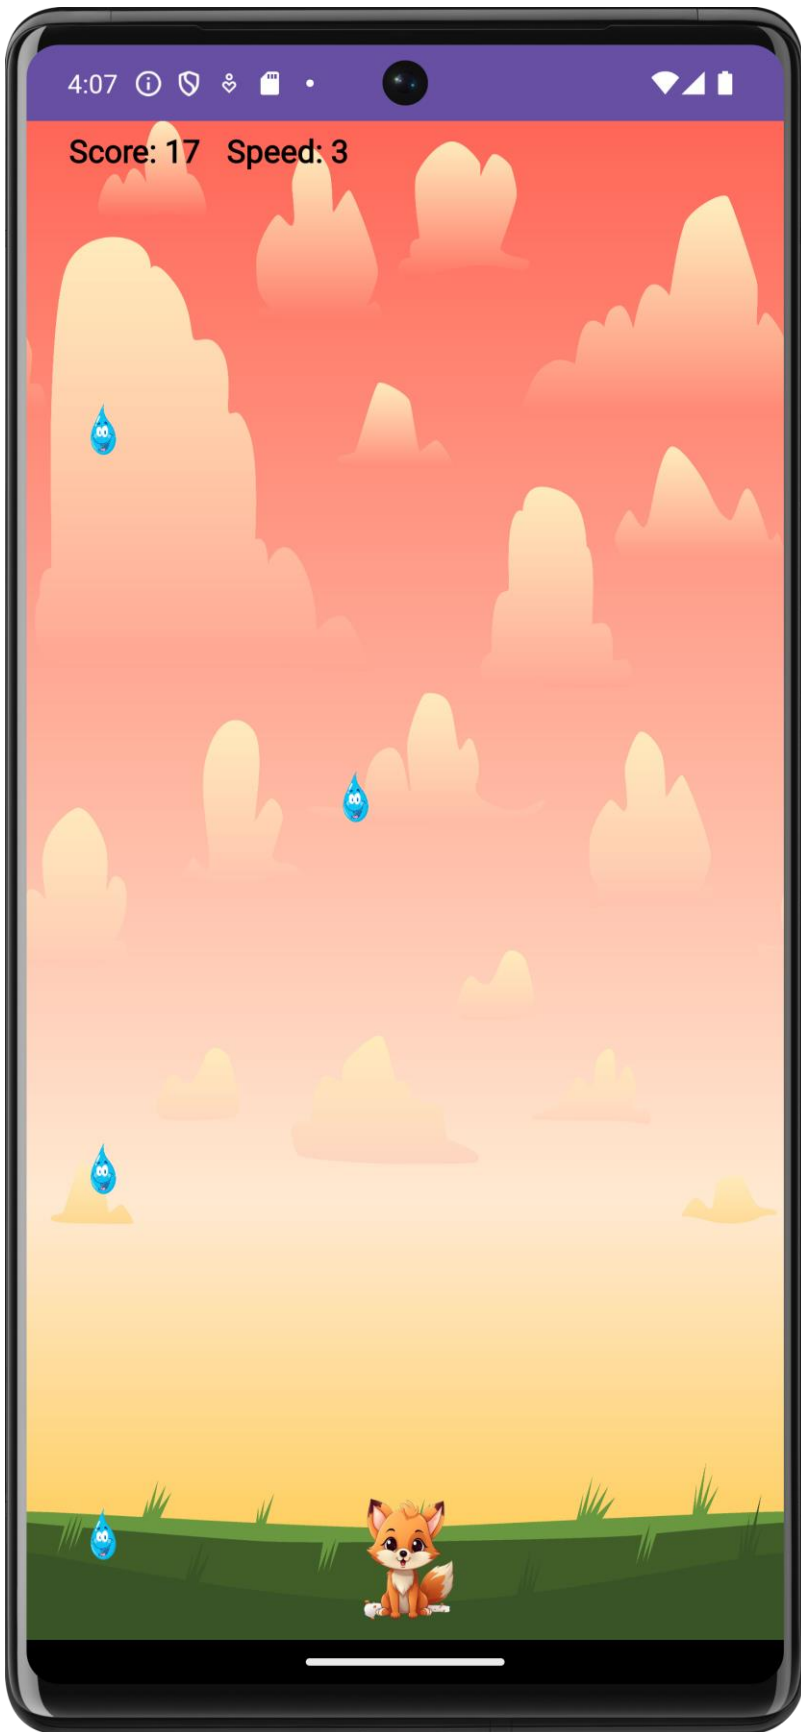

In "Raindrop Run," we take on the role of a fox, avoiding falling raindrops! Raindrops fall from the sky in this easy and entertaining game, and the goal is to protect the fox from getting hit. To move the fox, simply tap left or right. Try to avoid getting wet as much as you can. Your score increases the longer you avoid the raindrops! But be careful, if a drop of rain falls on the fox, the game is over.

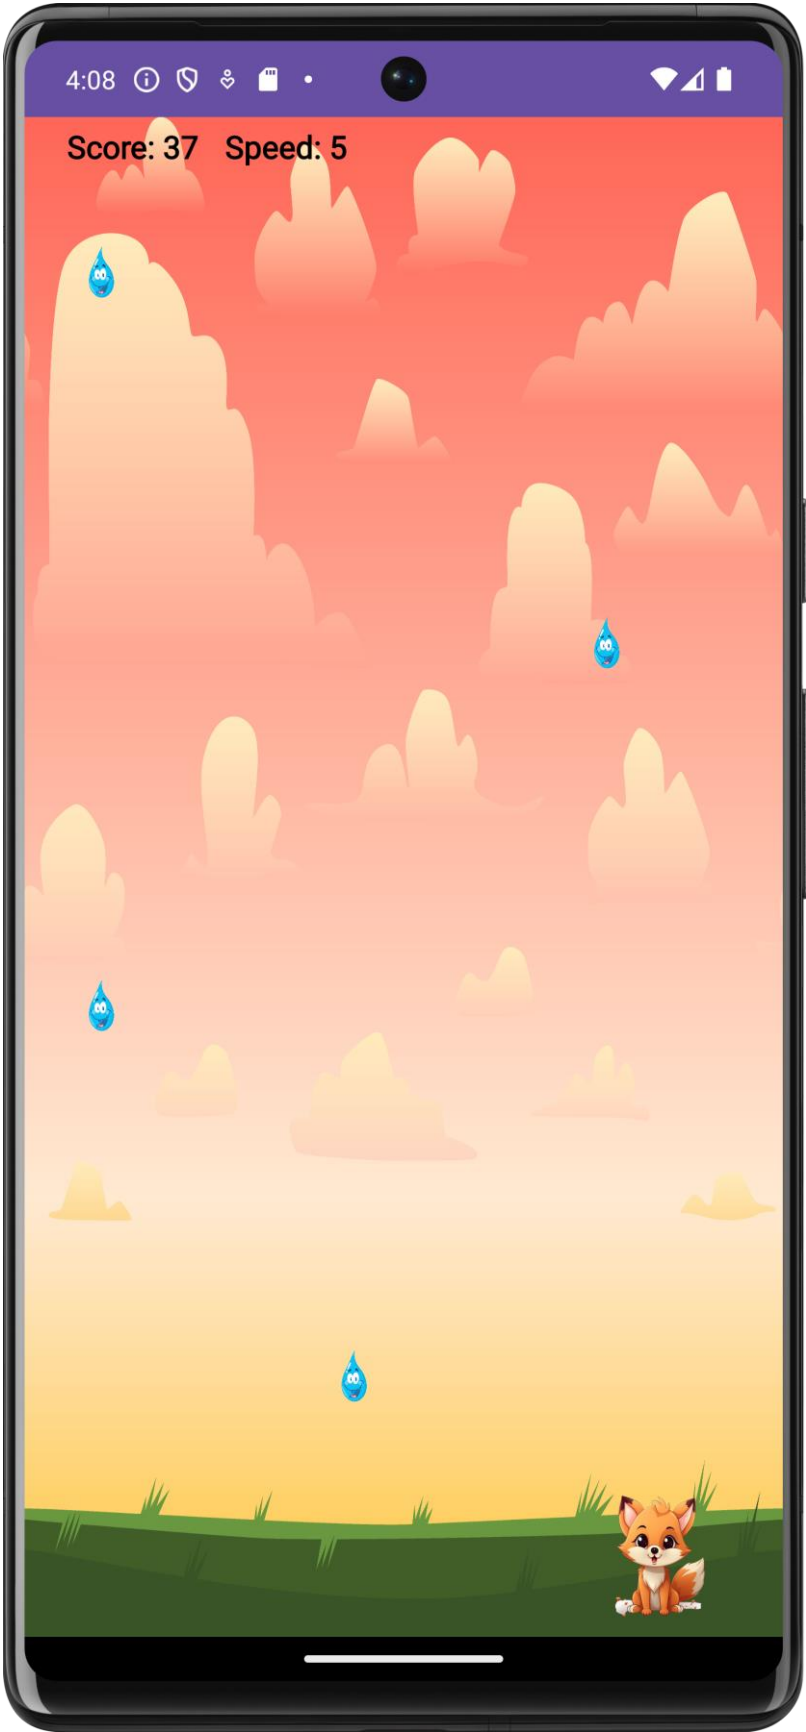

Instructions:

1. To help the fox survive as long as possible, you must help it avoid rains that are falling from the sky.
2. To move the fox left, click left, and to move it right, click right.
3. Every drop of rain that you successfully avoid earns you points. Your score will increase the longer you go without being hit.
4. The speed at which the raindrops fall will progressively quicken as you play.
5. When a raindrop strikes the fox, the game is over. Your final score will be shown, indicating your level of performance.
